

SAJAN CHAKKUMKATTUPARAMBIL RAJU

Identity and Access Management | Identity Governance and Administration | Microsoft Entra ID
| ISO 27701 Lead Auditor

Warsaw, Poland | +48 516 728 262 | crsajan98@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

M.Sc. Cybersecurity graduate (Vistula University, Warsaw) specialising in identity governance, access management, and IAM platform engineering. Holds ISO 27701 Lead Auditor certification. Built TrustShield IAM AI, a production-grade identity governance audit platform that automates access certifications, risk-scores entitlements across a 500-identity environment, and seals every finding with an Ed25519-signed, SHA3-512-hashed cryptographic audit trail — covering the full JML lifecycle and the core output of a 3rd Line access control audit. Built a live Microsoft Entra ID Governance Platform using Graph API and MSAL: automated user provisioning, bulk onboarding, manager approval workflows, and orphan and dormant account detection with governance audit report output. Completed a TCS IAM consulting simulation designing identity risk strategy and executive IAM assessment presentations. Legally authorised to work full-time in Poland.

CORE COMPETENCIES

Identity Governance and Administration: JML lifecycle automation, access certification workflows, entitlement risk scoring, orphan and dormant account detection, privileged access review

IAM Platform Engineering: Python-based governance automation, REST API integration, SQLite audit databases, Streamlit governance dashboards, Docker deployment, Ollama LLM integration

Access Control Audit: 3rd Line of Defense methodology, IIA 4E format findings (Condition, Criteria, Cause, Effect, Recommendation), DORA Article 9 access control requirements, ISO 27701 PIMS controls

Reporting and Stakeholder Communication: Executive governance KPI dashboards, department risk heatmaps, access review finding write-ups, senior management reporting (EY, Deloitte, TCS simulations)

Microsoft Entra ID (Azure AD): Graph API integration via MSAL and OAuth2, bulk user provisioning, RBAC assignment, conditional access policies, manager approval workflows

Cryptographic Audit Trails: Ed25519 digital signatures, SHA3-512 evidence hashing, HMAC-SHA3-512 integrity verification, tamper-evident audit vault design

Risk and Compliance: ISO 27701 Lead Auditor, ISO 27001, DORA, GDPR data access controls, audit finding documentation, remediation roadmap preparation

Automation and Tooling: Python (Pydantic v2, FastAPI, MSAL, cryptography library), Bash, Git, Docker, REST APIs, Active Directory, PowerShell

PROFESSIONAL EXPERIENCE

SOC Analyst Intern

October 2025 – January 2026

BSH Technologies Pvt. Ltd., Bhubaneswar, India (Remote from Warsaw, Poland)

Faculty-approved placement, Vistula University | Supervisor-proposed grade: 4.5 / 5.0

- Investigated security alerts across Linux and network environments, including authentication anomalies and suspicious access patterns — developing hands-on familiarity with the indicators that identity governance controls are designed to prevent.

- Identified three recurring threat patterns within two months by correlating multi-source log data; submitted findings as candidate detection improvements, two of which were adopted — demonstrating structured observation-to-finding reporting directly applicable to access control audit work.
- Built standardised investigation note templates covering observed behaviour, affected systems, severity context, and remediation guidance; templates were adopted into the team's shared process within the first month.
- Analysed phishing and BEC-style email samples including inspecting authentication records (SPF, DKIM), a form of identity verification directly relevant to IAM controls and identity spoofing threats.

Cybersecurity Operations Training Programme

2024 – 2025

Red Team Hacker Academy, Intensive SOC and Infrastructure Training (six months)

- Completed structured investigation exercises covering credential abuse, authentication anomalies, and access-based attack patterns using Splunk, Wazuh, and Snort — building direct familiarity with the access control failure modes that IAM platforms are designed to detect.
- Applied Python scripting to automate log parsing, event correlation, and report generation across authentication and authorisation event streams.

PROFESSIONAL SIMULATIONS — FORAGE (BIG 4 AND TOP-TIER FIRMS)

Cybersecurity Analyst, IAM Focus | *Tata Consultancy Services*

June 2026

Forage Virtual Simulation | IAM Strategy, Identity Management Design, Solution Architecture, Documentation

- Designed an IAM improvement strategy for a consulting scenario: mapped current identity risks to business objectives, identified gaps in JML processes and privileged access controls, and produced a written recommendation aligned with industry IAM frameworks.
- Delivered an executive-facing IAM assessment presentation in the format TCS uses for live cybersecurity consulting engagements, translating identity risk into business impact language for a non-technical audience.

Technology Risk Analyst | *EY (Ernst & Young)*

June 2026

Forage Virtual Simulation | IT Risk Analysis, Internal Controls, Risk Assessment, Professional Skepticism

- Assessed IT risk scenarios using EY's Technology Risk methodology, including access control evaluation and identity-related control gap identification — directly replicating 3rd Line audit fieldwork in IAM-adjacent engagements.
- Practised structured inquiry techniques EY auditors apply in active technology risk engagements, including probing vs. non-probing interview questioning around access provisioning and review processes.

Cyber Security Operations Analyst | *Datacom*

June 2026

Forage Virtual Simulation | Security Analysis, Risk Assessment, OSINT, Incident Investigation, Risk Management

- Investigated a simulated cyberattack from initial indicator through to root cause, including identity-related attack vectors, and produced a client-ready security report with ranked remediation recommendations.

Cyber Security Analyst | *Deloitte Australia*

June 2026

Forage Virtual Simulation | Log Analysis, Web Security, Python, Data Analysis, Breach Investigation

- Analysed web server activity logs to trace suspicious user sessions and access anomalies, using Python to surface patterns not visible in raw log output — mirroring access audit analysis techniques used in IAM review engagements.

FLAGSHIP IAM PROJECTS

TrustShield IAM AI: Identity Governance Audit Platform github.com/sajancr3/

2025 – 2026

[trustshield-iam-ai](#)

Python, Microsoft Entra ID (Graph API), Pydantic v2, Streamlit, SQLite, Ed25519, SHA3-512, Docker, Ollama LLM

- Designed and built a production-grade identity governance audit platform covering the full JML lifecycle: entitlement ingestion, risk scoring across five dimensions (sensitivity, privilege, dormancy, MFA gap, orphan status), access certification workflow, AI-assisted decision engine, and cryptographic audit evidence vault signed with Ed25519 and hashed with SHA3-512 and HMAC-SHA3-512.
- Automated detection of dormant accounts (90+ days inactive), accounts with MFA disabled, orphaned accounts with no active employee match, and terminated-user access retained post-offboarding — across a simulated 500-identity environment.
- Built a Streamlit governance dashboard with risk heatmaps by department, open-finding drill-downs, certification status tracking, and executive KPI reporting — covering the senior stakeholder reporting output expected in an IGA engagement.
- Integrated a local Ollama LLM as an AI Governance Advisor providing natural-language remediation guidance from live risk context, without exposing identity data to external APIs or cloud inference services.

Microsoft Entra ID Identity Governance Platform github.com/sajancr3/entra-id-identity-governance-platform 2025

Python, Microsoft Graph API, MSAL, OAuth2, RBAC

- Live integration with Microsoft Entra ID via Graph API using MSAL and OAuth2: automated user provisioning from CSV, manager approval workflows for access requests, bulk onboarding, conditional access policy evaluation, and RBAC assignment and review.
- Implemented dormant account detection (90-day threshold), orphaned account identification for unmatched users, and governance audit report generation aligned with access control review procedures used in IGA and IAM audit engagements.

DORA ICT Risk Assessment and Audit Platform — Access Control Module 2026 github.com/sajancr3/dora-audit-platform

Python, FastAPI, Pydantic v2, Streamlit, SQLite WAL mode

- Access governance findings are a core module of the DORA platform: the asset-risk pipeline flags entitlement gaps as ICT risk findings, the incident module records access-related incidents, and the audit findings module tracks remediation in IIA 4E format — directly mapping DORA Article 9(4)(c) access review requirements to actionable audit output.

EDUCATION

M.Sc. Computer Science: Cybersecurity and Reliability of IT and Industrial Systems Graduated June 2026

Vistula University (Akademia Finansów i Biznesu Vistula), Warsaw, Poland

Relevant modules: Digital Forensics and Malware Analysis, Security of Computer Systems, Risk Analysis, Cloud Technologies, Linux and Ubuntu Operating Systems, Wireless and Mobile Security, Computer Networks and Protocols.

Thesis: Design and Implementation of a Quantum-Resistant Cryptography Computer System — the SHA3-512 and Ed25519 patterns from this research underpin the TrustShield cryptographic audit vault.

B.Sc. Computer Applications

University of Calicut, India

CERTIFICATIONS AND PROFESSIONAL CREDENTIALS

ISO 27701 Lead Auditor | Mastermind, 2026 | Privacy Information Management System (PIMS), GDPR data access controls, third-party PIMS audit planning and reporting — directly relevant to IAM governance and data access audit

CICSA (Certified Information and Cybersecurity Analyst) | Red Team Hacker Academy, 2024 | SIEM monitoring, authentication anomaly detection, SOC operations

ANZ Cybersecurity Virtual Experience Programme | Forage | Phishing and BEC-style email analysis, identity spoofing detection, banking-sector incident classification

TCS Cybersecurity Analyst: IAM Focus | Forage, 2026 | IAM strategy design, identity risk mapping, executive IAM assessment presentation

EY Technology Risk Virtual Programme | Forage, 2026 | IT risk assessment, access control evaluation, internal controls, professional skepticism

Datacom Cyber Security Operations | Forage, 2026 | Cyberattack investigation, risk assessment, client-ready reporting

Deloitte Cyber Security Analyst | Forage, 2026 | Log analysis, access anomaly investigation, Python-assisted data analysis

WORK ELIGIBILITY AND LANGUAGES

Work authorisation: Legally authorised to work full-time in Poland. EU work authorisation documents available for HR on request. **International travel:** Available for international IAM engagements and onsite assignments.

Languages: English: C1 Professional | Polish: Conversational, actively advancing | Malayalam: Native | Hindi: Fluent
